

For anybody who wants to automatically deploy and scale decentralized services or applications at a fraction of the cost of traditional cloud service providers

SUMMARY

CPUcoin has developed the Computing Global Network or CGN. Our technology enables anyone to install our miner client and collect funds for their unused compute time. Think of us as the "Airbnb" for CPU/GPU compute power and a platform for automatically deploying and scaling Decentralized Services and DApps. The first dApp found at Tweekit.io processes content at 1/10th the cost of any other comparable service

FAQS

How will you ensure adoption of the network?

CPUcoin has struck a partnership deal with long-time media processing company Equilibrium. Their decentralized service MediaRich currently runs on the CGN and powers multiple Fortune 500 companies including Walmart, Adidas, Warner Bros, Sony Pictures and The Department of Energy.

Why do we have a cryptocurrency – Ticker: CPU?

CPU will be the digital asset used to pay for consumption of services, as well as for making payouts to providers of idle computer time. Our go to market strategy is to payout directly to exchanges so that miners become active traders and liquidity pool payouts are fast and free.

How does this differ from AWS or Azure?

CPUcoin provides 4.5 times more throughput per dollar than AWS Lambda and 120 times more throughput than AWS On Demand. In addition, CPUcoin users only pay for actual resources used, thus providing limitless scalability & elasticity on the edge.

KEY PROJECT STATS

- > Over 140K CPU wallet holders
- > Easy to use miner
- > Miner compatible with 2.5B devices globally
- > Ability to earn CPU directly into exchange wallet
- > Miners in 80+ countries
- > Conducting critical COVID-19 research via BOINC integration
- > Newly launched DApp – Tweekit.io
- > CPU/USDT Trading Pair – ProBit Exchange

PROBLEMS

\$1 trillion + spent annually on IT infrastructure

40% runs idle at any given moment

Difficult to monetize unused compute resources

Unsustainable IT waste management

SOLUTIONS

Decentralized global network of computational resources

Reward providers of idle compute with cryptocurrency

Scales any decentralized application or service at the edge

Provides 4.5x throughput than traditional cloud service providers at a fraction of the cost

MILESTONES

EXECUTIVE TEAM

Sean Barger
Founder & CEO

With over 30 years of management, engineering and production experience in the software industry, Mr. Barger is a serial entrepreneur with a history of pioneering award-winning products in games, software and SaaS services.

Matt Butler
VP of Engineering

Matt has long history in software engineering, building enterprise class servers and integrating them in various environment. He is also the principal developer of the first decentralized service and DApp service running on the CGN.

Michael Terpin
CEO Transform Group CRPR & Advisor

Michael spent his career innovating in PR, technology platforms, and the space in between. Currently, he runs the Transform Group, the world leader in blockchain and ICO PR and advisory services, as well as CoinAgenda

Tony Tong
Co-Founder of HKBA & Advisor

MR. TONY TONG is a serial entrepreneur, Co-Chairman & Co-Founder of Hong Kong Blockchain Association HKBA.club & Hong Kong Blockchain Academy HKBA.hk.org, Co-Founder of Dena Group, Co-Founder of GlobalSTOX, Former CSO of Madison Blockchain HKEX 8027, Co-Founder of Pacific Financial Services and SuperAngelsVentures.com
